Subject: RE: Monthly Call with TCEQ
Date: Wednesday, October 29, 2014 4:16:00 PM

Carlos,

Update for San Jacinto River Waste Pits IAG with USACE.

- USACE work began this month (10/2014).
- USACE will provide an independent review/assessment of a broad range of site issues. These include hydraulic/sediment modelling of the San Jacinto River, bed scour, design/construction/performance review of the entire existing cap, long-term cap reliability, institutional controls, dredging re-suspension and residuals, dredging best management practices, floodplain impacts of construction, water quality and fish/crab impacts, potential for release and mitigation of potential storm impacts during construction, natural attenuation rates, and review of PRGs for the site.
- Working with USGS to run their acoustic doppler current velocity and side scan sonar tools to provide information to USACE for model calibration and cap assessment.
- A site visit is planned with the USACE on November 12, 2014.
- The USACE will prepare three reports to cover the required tasks; the reports are expected in January, March, and April 2015.

Regards,

Gary Miller
